What makes Arch different?

What makes Arch different?

- Arch Linux is a *lightweight* Linux distribution with a *Keep it Simple* philosophy.

What makes Arch different?

- Arch Linux is a *lightweight* Linux distribution with a *Keep it Simple* philosophy.
- Arch only provides you with a minimal base system, allowing you to pick and choose what you would like to install.

What makes Arch different?

- Arch Linux is a *lightweight* Linux distribution with a *Keep it Simple* philosophy.
- Arch only provides you with a minimal base system, allowing you to pick and choose what you would like to install.
- Arch is a rolling release system, so you will never have to upgrade to a new version of Arch.

What makes Arch different?

- Arch only provides you with a minimal base system, allowing you to pick and choose what you would like to install.
- Arch is a rolling release system, so you will never have to upgrade to a new version of Arch.
- Most system configuration is performed from the shell by editing simple text files.
- Arch strives to stay bleeding edge, and typically offers the latest stable versions of most software.
- Arch isn't just a Linux distribution, Arch is a lifestyle.

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader
- 3 Go to the webpage for Adobe Reader

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader
- 3 Go to the webpage for Adobe Reader
- 4 Click download

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader
- 3 Go to the webpage for Adobe Reader
- 4 Click download
- 5 Run `adobereader_installer.exe`

Yikes! Who knows what this will do to your computer!

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader
- 3 Go to the webpage for Adobe Reader
- 4 Click download
- 5 Run `adobereader_installer.exe`
Yikes! Who knows what this will do to your computer!
- 6 Untick all the McAfee and other bloatware

Package Management

Unlike Windows and OS X, most Linux distributions include a package manager. A package manager allows you to install and update software without going through websites and untrusted install files.

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader

Installing software (PDF viewer) on Windows

- 1 Open a web browser
- 2 Do a web search for Adobe Reader
- 3 Go to the webpage for Adobe Reader
- 4 Click download
- 5 Run `adobereader_installer.exe`
Yikes! Who knows what this will do to your computer!
- 6 Untick all the McAfee and other bloatware
- 7 Profit? Not really... What happens when you need to update everything on your system?

Installing a PDF viewer on Arch Linux

- 1 Open your terminal and run
`pacman -S zathura` (one of my favourite PDF viewers)

Installing a PDF viewer on Arch Linux

- 1 Open your terminal and run
`pacman -S zathura` (one of my favourite PDF viewers)
- 2 Pacman will tell you how much data it will need to download and the total installed size, and additionally any dependencies zathura will need to run. Just press `y` to confirm you would like all this.

Installing a PDF viewer on Arch Linux

- 1 Open your terminal and run
`pacman -S zathura` (one of my favourite PDF viewers)
- 2 Pacman will tell you how much data it will need to download and the total installed size, and additionally any dependencies zathura will need to run. Just press `y` to confirm you would like all this.

Installing a PDF viewer on Arch Linux

- 1 Open your terminal and run
`pacman -S zathura` (one of my favourite PDF viewers)
- 2 Pacman will tell you how much data it will need to download and the total installed size, and additionally any dependencies zathura will need to run. Just press `y` to confirm you would like all this.

Better yet, when you need to update everything on your system, just run

```
pacman -Syu
```

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.
- 2 Boot the installation media. Arch just gives you `zsh` and a few convenient programs to install.

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.
- 2 Boot the installation media. Arch just gives you `zsh` and a few convenient programs to install.
- 3 Load your keyboard layout using `loadkeys`.

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.
- 2 Boot the installation media. Arch just gives you `zsh` and a few convenient programs to install.
- 3 Load your keyboard layout using `loadkeys`.
- 4 Connect to the network. You will need to start `dhcpd` on your interface if you use DHCP.

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.
- 2 Boot the installation media. Arch just gives you `zsh` and a few convenient programs to install.
- 3 Load your keyboard layout using `loadkeys`.
- 4 Connect to the network. You will need to start `dhcpd` on your interface if you use DHCP.
- 5 Partition your drive using your favourite (and appropriate) tool (ex. `cgdisk`)

Installing Arch

- 1 Visit <https://www.archlinux.org> and download the latest ISO. Copy this to a USB or other installation media.
- 2 Boot the installation media. Arch just gives you `zsh` and a few convenient programs to install.
- 3 Load your keyboard layout using `loadkeys`.
- 4 Connect to the network. You will need to start `dhcpd` on your interface if you use DHCP.
- 5 Partition your drive using your favourite (and appropriate) tool (ex. `cgdisk`)
- 6 Format your partitions using the filesystem of your choice. You may choose to use LUKS for full disk encryption.

Installing Arch

- 7 Mount your root filesystem at `/mnt`
`# mount /dev/sdxY /mnt`

Installing Arch

- 7 Mount your root filesystem at `/mnt`
`# mount /dev/sdxY /mnt`
- 8 Mount any remaining partitions in their respective location in `/mnt`.
`# mkdir -p /mnt/boot`
`# mount /dev/sdxZ /mnt/boot`

Installing Arch

- 7 Mount your root filesystem at `/mnt`
`# mount /dev/sdxY /mnt`
- 8 Mount any remaining partitions in their respective location in `/mnt`.
`# mkdir -p /mnt/boot`
`# mount /dev/sdxZ /mnt/boot`
- 9 Edit `/etc/pacman.d/mirrorlist` and uncomment some good mirrors.

Installing Arch

- 7 Mount your root filesystem at /mnt
mount /dev/sdxY /mnt
- 8 Mount any remaining partitions in their respective location in /mnt.
mkdir -p /mnt/boot
mount /dev/sdxZ /mnt/boot
- 9 Edit /etc/pacman.d/mirrorlist and uncomment some good mirrors.
- 10 # pacstrap -i /mnt base base-devel zsh vim

Installing Arch

- 7 Mount your root filesystem at `/mnt`
`# mount /dev/sdxY /mnt`
- 8 Mount any remaining partitions in their respective location in `/mnt`.
`# mkdir -p /mnt/boot`
`# mount /dev/sdxZ /mnt/boot`
- 9 Edit `/etc/pacman.d/mirrorlist` and uncomment some good mirrors.
- 10 `# pacstrap -i /mnt base base-devel zsh vim`
- 11 Generate your `fstab`. Check for errors afterwards.
`# genfstab -U /mnt > /mnt/etc/fstab`

Installing Arch

12 chroot into your system. `arch-chroot /mnt
/usr/bin/zsh`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`
- 19 Install bootloader

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`
- 19 Install bootloader
- 20 Configure network

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`
- 19 Install bootloader
- 20 Configure network
- 21 `# passwd`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`
- 19 Install bootloader
- 20 Configure network
- 21 `# passwd`
- 22 `# exit`

Installing Arch

- 12 chroot into your system. `arch-chroot /mnt /usr/bin/zsh`
- 13 Edit `/etc/locale.gen` and uncomment the locale of your choice.
- 14 `# locale-gen`
- 15 `# echo LANG=en_US.UTF-8 > /etc/locale.conf`
- 16 Edit `/etc/vconsole.conf` and include your keyboard layout.
`KEYMAP=wuly`
- 17 `# ln -sf /usr/share/zoneinfo/Zone/SubZone /etc/localtime`
- 18 `# hwclock --sys-to-hc --utc`
- 19 Install bootloader
- 20 Configure network
- 21 `# passwd`
- 22 `# exit`
- 23 `# reboot`

Post-installation Recommendations

- Create another user for yourself

Post-installation Recommendations

- Create another user for yourself
- Install a display server (X.org, wayland)

Post-installation Recommendations

- Create another user for yourself
- Install a display server (X.org, wayland)
- Install a login manager (SLiM, xdm, SDDM, lightdm, etc.)

Post-installation Recommendations

- Create another user for yourself
- Install a display server (X.org, wayland)
- Install a login manager (SLiM, xdm, SDDM, lightdm, etc.)
- Install a window manager (i3, xmonad, GNOME, etc.)

Post-installation Recommendations

- Create another user for yourself
- Install a display server (X.org, wayland)
- Install a login manager (SLiM, xdm, SDDM, lightdm, etc.)
- Install a window manager (i3, xmonad, GNOME, etc.)
- Install useful programs (dmenu, Firefox, Python, etc.)

When things go wrong...

When things go wrong...

Error messages can be terrifying when you aren't prepared for them; but they can be fun when you have the right attitude. Just remember that you really haven't hurt the computer's feelings, and that nobody will hold the errors against you.

— D. E. Knuth, the $\text{T}_{\text{E}}\text{X}$ book, p. 30

How to get help

- Come to LUG!
- Send mail to our mailing list:
`lug@mailman.mines.edu`
- Check the Arch Wiki:
`https://wiki.archlinux.org`
- Post on the Arch BBS:
`https://bbs.archlinux.org`
- Linux & Unix Stack Overflow:
`http://unix.stackexchange.com`
- The Linux Documentation Project
